DETAILED ACTION

1. Applicant's arguments to claims 1-10, 33-42, 56 and 59 have been considered but are most in view of the new ground(s) of rejection.

Claim Rejections - 35 USC \$ 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-10, 33-42, 56 and 59 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

In the first paragraph of pages 1 and 10 of the specification, the specific density is related to atomic mass unit (or molecular weight) of a gas and that of the energy content as the heat produced by a gas in BTU. As a gas is a matter (an

Art Unit: 1753

entity) in a gaseous state, the matter cannot increase it mass and energy content after the process because if it is, it is contradict to the law of conversation of mass and the laws of Thermodynamics. Further, the matter itself does not possess any energy content.

The term "magnecules" is found throughout the specification, however, there is no independent verification for the existing of the new chemical species.

Claim Rejections - 35 USC § 101

4. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

5. Claims 1-10, 33-42, 56 and 59 are rejected under 35 U.S.C. 101 because the claimed invention lacks patentable utility. The gas having the recited increasing specific density and energy content is a new form of matter which has not established or recognized by the science community. And the gas, known as a matter (or an entity) in gaseous state, itself does not possess any BTU or energy content and cannot increase its mass as this would contradict to the laws of Thermodynamics and the law of conversation of mass.
